

The graphic features a central globe surrounded by glowing green binary code (0s and 1s) and circular data paths. A silver padlock is positioned in the foreground, partially overlapping the globe. The text 'SECURE DIGITAL VAULT' is prominently displayed in green and white, with a green shield icon containing a white checkmark to the left. Below the main title, a smaller line of text reads 'allowing secure web access to your data'. Further down, a paragraph describes the service as a central secure web repository for internal and external data. At the bottom right, the phrase 'KEEPING YOUR DATA SAFE' is written in white capital letters.

SECURE
DIGITAL VAULT
allowing secure web access to your data

One central secure web repository
Whether its your internal data or
external data, knowing you have a
secure and simple way to access this
from anywhere in the world.

Secure Digital Vault from Web Dynamics

Secure digital vault is a secure online repository of your files that you may share with clients and colleagues around the world. As an administrator you can manage users to certain folders and rights while the system fully audits all transactions and ip addresses

Building On Trust

Secure Digital Vault builds their trust by hosting and delivering digital data via an advanced and secure user interface. In addition, an incredibly feature rich control panel allows authorized users to manage accounts, set upload/download rights per user, generate upload/download reports for billing and more!

Key features:

- Allows users to upload files to a central storage location.
- Files in the Vault may then be searched, sorted and arranged.
- Bill For Downloads in the Digital Information Age
- Digital Vault database tracks all downloads and uploads per each individual user for accurate auditing.
- File sizes are recorded.
- Bandwidth Manager
- Sort user activity by file type, download frequency and total bandwidth used.
- Users may view files, download individual files and select multiple files to download in ZIP format.
- Advanced interface allows for emailing of technical data files with full tracking and accounting per authorized user.
